[C\) Transition from the old to the new GUNNER24
Setup](#)

D) Determination of the GUNNER24 Initial Impulse

E) GUNNER24 Initial Impulse with just one long candlestick

F) Gap trading strategies – The chicken that lays the golden eggs

G) Trading with multiple time frames

H) Overnight trading

I) Advanced GUNNER24 Setups

1. Recognize resistance and support double arcs, respectively by overlaying a second setup in the chart

2. Determination of targets (time/price) within the current GUNNER24 Setup

3. Determination of targets which cannot be included in the actual setup any more by piling up the setup

4. Inventive Advanced GUNNER24 Setups

J) Definitions pertaining to the GUNNER24

Purpose and structure of the manual

This eBook will familiarize you with common trade entry methods of the GUNNER24 Forecasting Technique we know of. It should enable you to trade with more efficiency, safety and success by means of the GUNNER24 Techniques.

The trading setups will hold up over time, in any kind of market. You will learn everything you need to know about the GUNNER24 Trading Setups – step-by-step. You will be supported in it by concrete real-life examples with many charts.

What this eBook is not designed to do is to teach you the critical knowledge you need to forecast and analyze the markets with the GUNNER24 Forecasting Technique.

Any trader/investor who wants to completely understand this innovative and revolutionary forecasting method should study the "[Complete GUNNER24 Trading and Forecasting Course](#)".

This course covers the complete start to finish approach to trading and forecasting, from the definition of the initial impulse, the facts behind it's function, the complete trading rules to the most advanced GUNNER24 Applications. The materials in this course are all you will ever need if you plan to trade the market's and make a living doing so.

In an effort to stay focused, this eBook will not discuss the basics of trading, or technical analysis, or any other such rudimentary, basic endeavors. It also has no separate chapter to the topic of defining risk, money management and controlling your emotions. If you are familiar with these trading issues you will see that the GUNNER24 Trading approach offers a very disciplined, low-risk approach to trading.

So it is focused on the real and practical trading with the GUNNER24 Forecasting Technique.

A) High/Low rules and fixing of the GUNNER24 Impulse Move

Introduction

The future schedule of the price data is defined by the first initial impulse. In 85% of all cases, this latter spans 1, 2, 3, 5, 8, 13 or 21 etc. time units.

That is the well-known Fibonacci sequence. You see each following figure is the sum of the two previous ones.

In the very majority of the cases, the GUNNER24 Impulse Move stretches from the extreme point of the 1st candle to the extreme point of the 5th candle, for instance.

So, with the GUNNER24 Up Setup we use to measure the following way:

- from the absolute low of the 1st candle to the absolute high of the 1st candle.
- from the absolute low of the 1st candle to the absolute high of the 2nd candle.
- from the absolute low of the 1st candle to the absolute high of the 3rd candle.
- from the absolute low of the 1st candle to the absolute high of the 5th candle.
- from the absolute low of the 1st candle to the absolute high of the 8th candle.

etc.

And with the GUNNER24 Down Setup we measure correspondingly:

- from the absolute high of the 1st candle to the absolute low of the 1st candle.
- from the absolute high of the 1st candle to the absolute low of the 2nd candle.
- from the absolute high of the 1st candle to the absolute low of the 3rd candle.
- from the absolute high of the 1st candle to the absolute low of the 5th candle.
- from the absolute high of the 1st candle to the absolute low of the 8th candle.

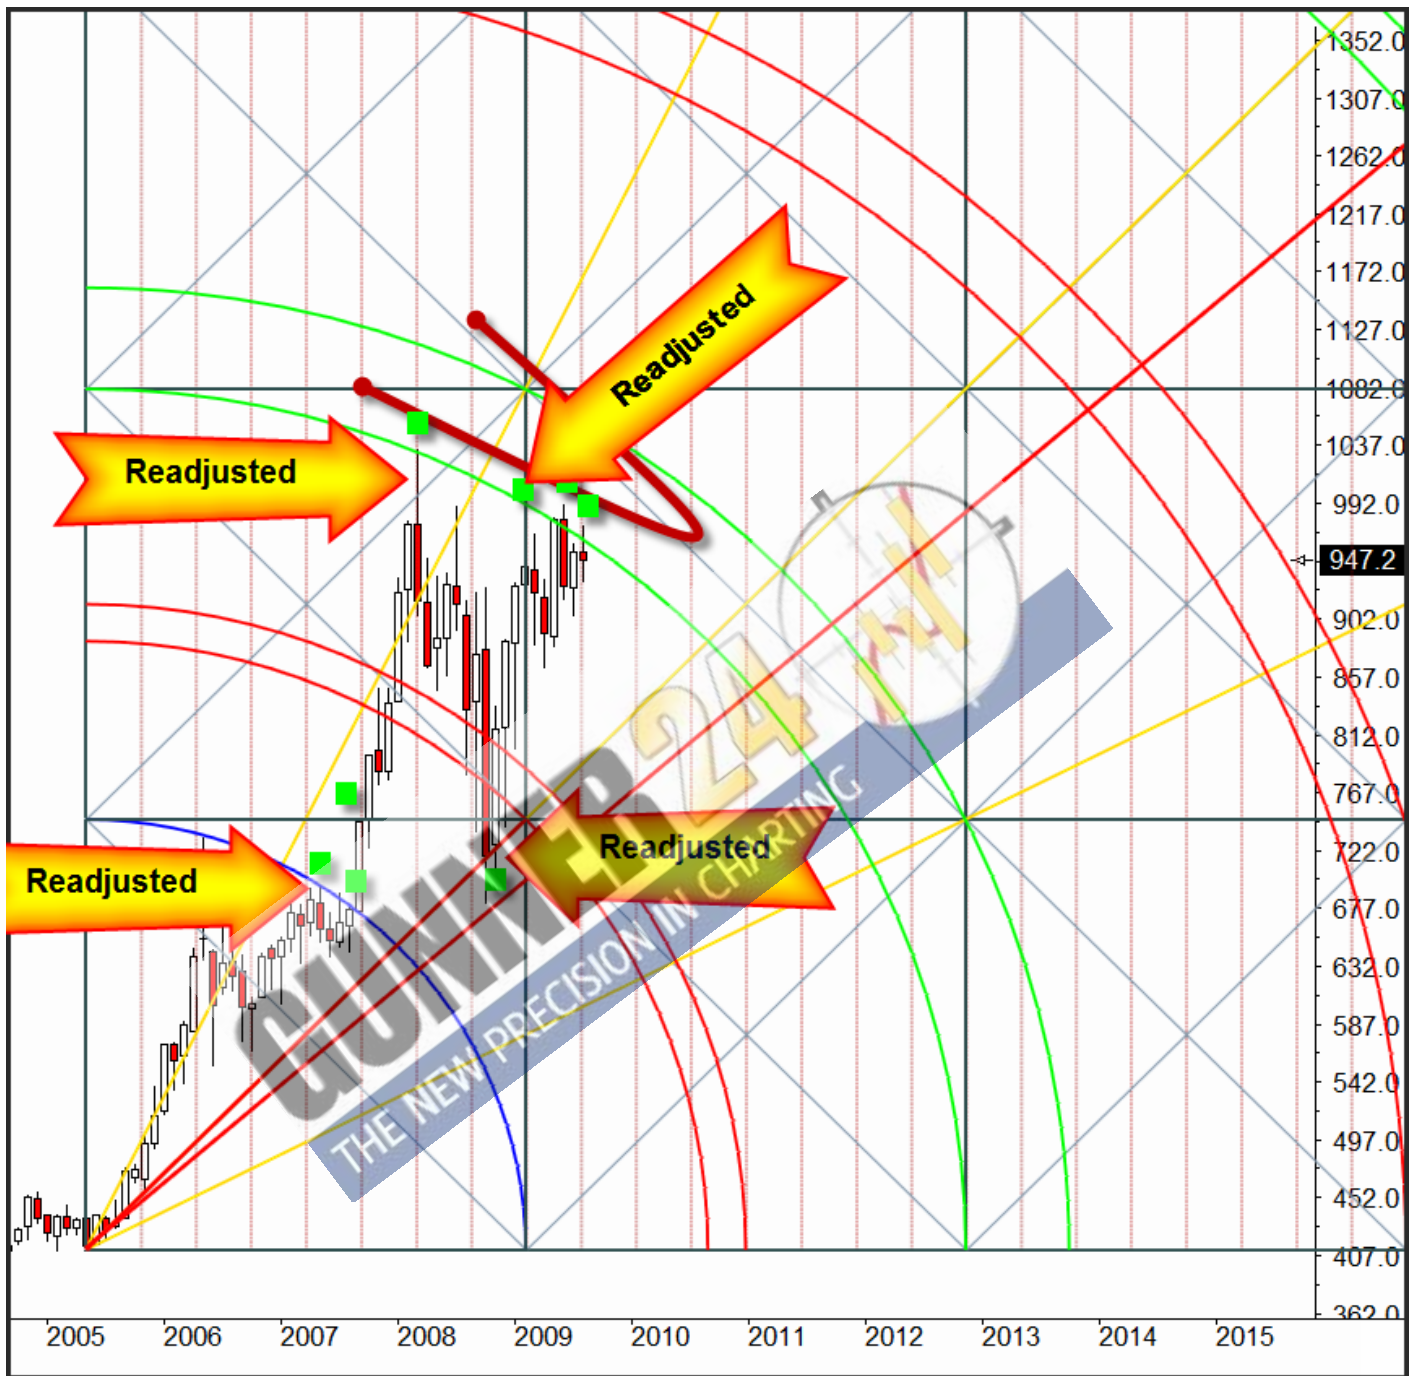

etc.

It is not difficult to identify the authentic Initial Impulse. In the everyday practice while analyzing all those different markets and time frames, the GUNNER24 Initial Impulse happens to such an extent that you may ask yourself why you have paid no or little attention to it.

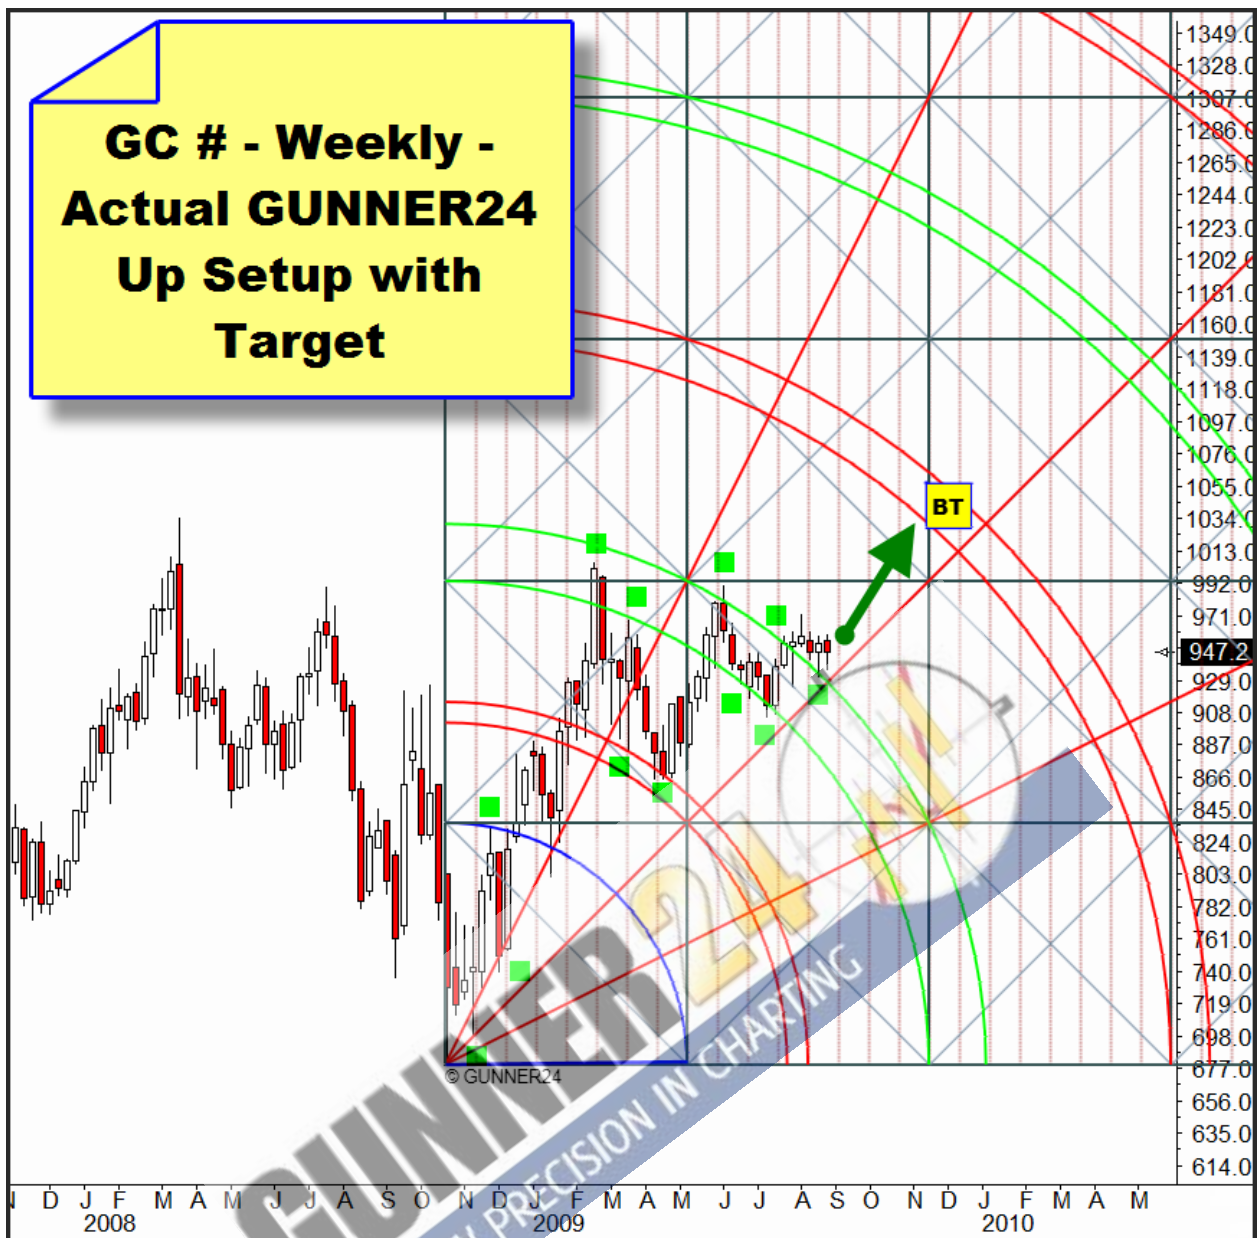

In the following two charts you find the count for a GUNNER24 Down Setup:

A downswing lasts for instance 16 candles, so you define the lowest low at the 16th candle, count back 13 candles from that 16th candle, including that 16th candle and you get the GUNNER24 Starting Point.

To achieve better concurrences with important time lines, the blue arc and the double arc, we carry out a fine tuning with the elliptical setup.

The GUNNER24 Initial Impulse goes through the high of the 6th and the 8th candle. The count of this GUNNER24 Initial Impulse is perfect. The important exact concurrences where the price precisely follows and meets the square lines, the Gann Angles and the double arcs are marked with the little green squares.

This is what attracts attention:

The price works its way above the 1*1 Gann Angle upwards = bullish. During 6 months, the price was delayed by the 2nd green double arc, but it already closed in February, 2008 within that double arc which hints that the next double arc and the first main target on weekly base with it should be reached in trend direction at any rate.

The outbreak out of the 2nd double arc took place in July, 2009 and the back test of that double arc at its upper double arc line occurred in August, 2009. Strong buy with first main target at 1035-1055 followed at the end of October, 2009.

Before we go on analyzing and forecasting the price I would like to show you just right here all the trades which according to the trading rules, inescapably result from the GUNNER24 Setup.

1. Enter the GUNNER24 Up Setup with one position at the reversal candle. Place the stop loss for the trade at the first starting point. There work always with the reverse and double technique.

2. execute the 2nd buy position at the closing price of the correspondingly candle.

3. 3rd buy is

4. 4th buy is

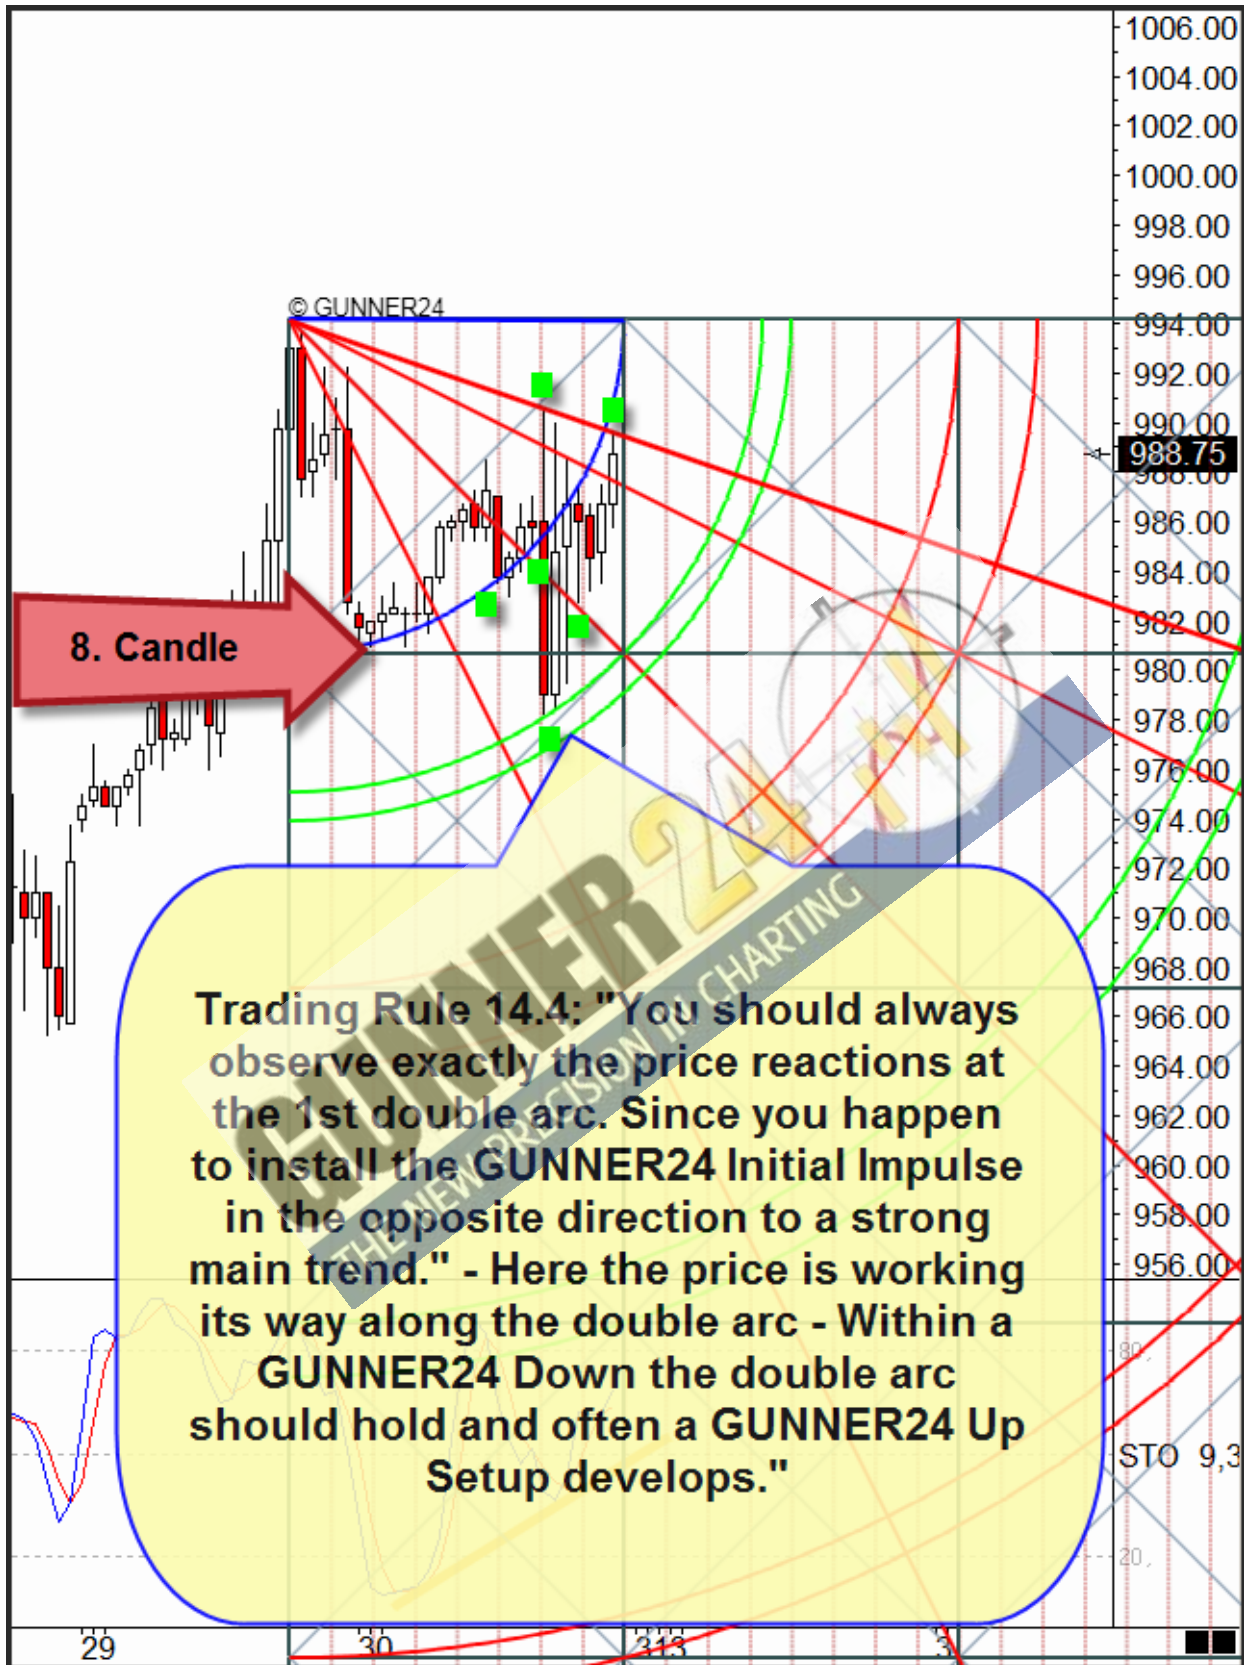

5. Targets are for now the 2nd, 3rd and the 5th double arc. Place the new stop loss for the trade at horizontal line of the first square.

6. We do not cover the positions at the 2nd double arc because

Place the new stop loss for the trade at the upper horizontal line of the 3rd passed square.

8. Cover all the longs at the first main target, the 3rd double arc. The fact that points to a reversal.

Now let's look at the developed GUNNER24 Down Setup:

Corresponding to the **rule 14.4** we suppose a newly emerging GUNNER24 Up Setup.

For our trading with the GUNNER24 Forecasting Method, the knowledge that far **more than a 50 % of all the gaps are closed the same day** is enough. So we can assume that at more than a 50% the yesterday closing price is going to be reached again and in that environment the direction of the original gap is going to be got started.

If the opening price as well as the target price correspond with our GUNNER24 Setup with our GUNNER24 Gap Trading Strategy we will have at our disposal a technique which produces for us far more than a 90% of winners.

In the order

at first in

you see an 8 hour chart. In the 24 hour trading markets the systematics of the GUNNER24 Forecasting Method are valid in the 8 hour chart as well.

The situation: We have got an 8 Candle GUNNER24 Up Setup. If we lead along the vector

The market is above the 1*1 Gann Angle = bullish. The actual candle perhaps wants to break the steeper 2*1 Gann Angle.

The price is in

and it is

close in front of the diagonal line of the actual square where we are expecting

main target (3rd the uptrend is

double arc)

very strong and lasting long.

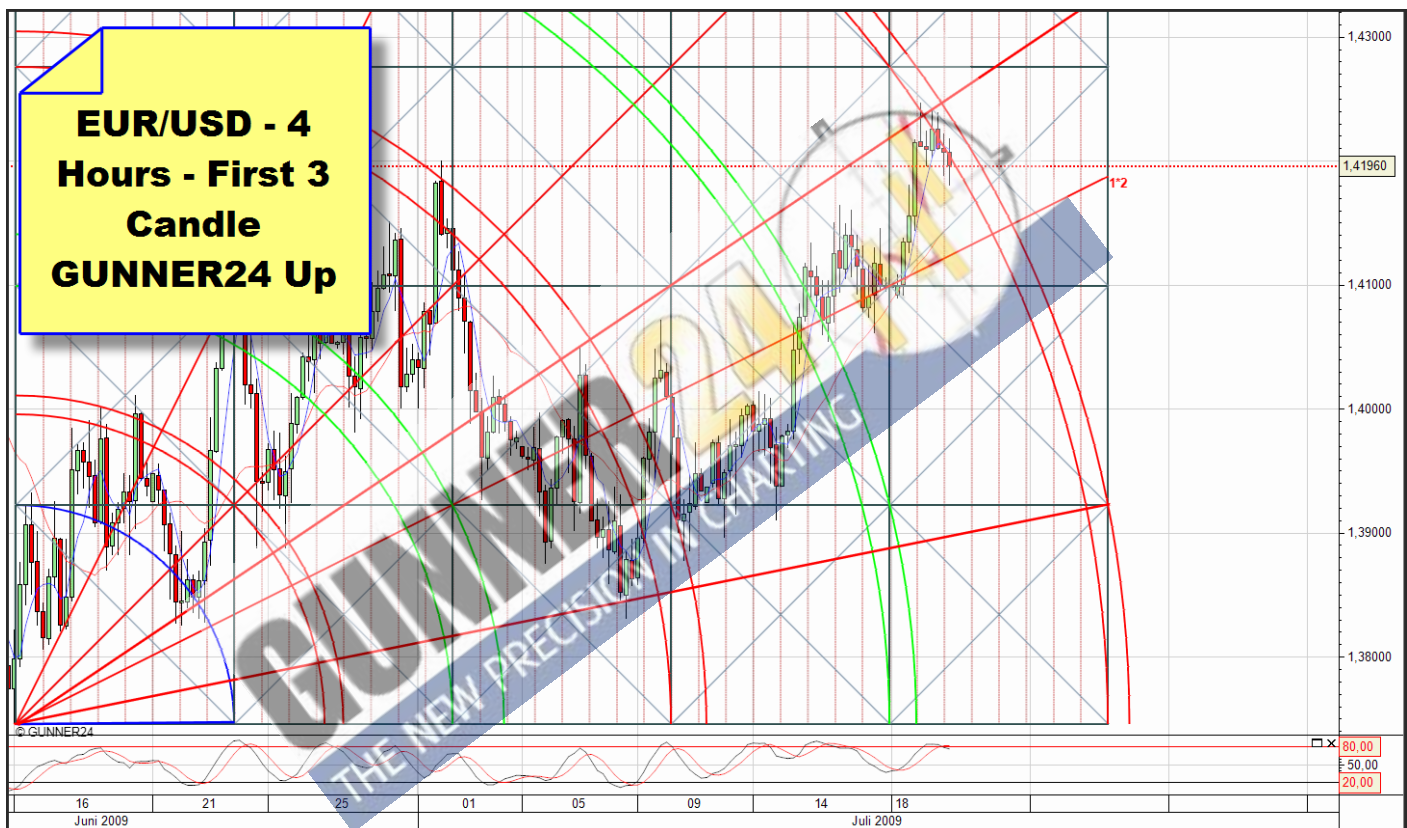

According to the rules of the GUNNER24 Forecasting Method we are in an excellent long position already and keep on trying to accumulate in order to cover then all the longs at the 3rd double arc. The adjusting of the stop loss what we always should do is not described in this chart.

I) Advanced GUNNER24 Setups

In the previous chapters you saw the use of the Advanced GUNNER24 Setup Techniques sometimes.

There are some important employment areas for the Advanced GUNNER24 Setups you should consider while trading:

1. Recognize resistance and support double arcs, respectively by overlaying a second setup in the chart

Situation: Obvious resistance at the 5th double arc.

By piling up the setup the further price course can be followed precisely.

Definition of the candle reversal technique:

- In an uptrend where a series of rising swing lows is present the trend change happens after the highest candle in the uptrend. You go short if the candle body of that highest high candle of the uptrend is broken on final price basis. The absolute high of the uptrend is your stop.
- In a downtrend where a series of lower swing lows and lower swing highs is present, the trend change happens after the lowest low candle of the downtrend. You go long if the candle body of that lowest low candle of the downtrend is broken on final price basis. The absolute low of the downtrend is your stop.

Definition of the lost motion: The lost motion is the maximum or the average amount, respectively by which a resistance or support line can be crossed without breaking.

[GUNNER24 Forecasting Charting Software](#)

The GUNNER24 Forecasting Charting Software will show you a completely new and highly successful cycle technique. You will recognize turnarounds with bull's eye precision in advance and, most importantly, you will also be able to see at which price levels the cycles will in fact change. After a brief period of learning, you will already have developed the skill to anticipate market movements. The special GUNNER24 Cycle Technique will open your thinking to a completely novel approach. You will identify milestones of paradigm shifts that have absolutely nothing in common with the conventional and obsolete cycle technique. They are absolutely innovative and have not yet been discovered. [Order NOW!](#)

[Complete GUNNER24 Trading and Forecasting Course](#) – learn to use a forecasting technique that produces 70% winner trades

This course describes the GUNNER24 Forecasting Method in detail. It was developed by two experienced traders in conjunction with their own trading activities. The combination of different time levels, the GUNNER24 Impulse Wave Technique and the recurring price patterns discovered again and again throughout the years, put at your disposal precise trading signals that will translate into true prosperity if they are used consistently and in the absence of emotion-driven decision-making.

Among other things, you can apply the GUNNER24 Forecasting Technique to the following national and international markets: Stocks, indices, currencies, commodities, futures, bonds, metals. The GUNNER24 Setups will show you precisely whether you should focus on short term trades, swing trades, or intermediate term trades. [Click and order!](#)
